

Two Files Are Good Candidates for API Enablement

EMPREC.cpy and **JOB001.jcl** are both excellent candidates for API enablement or cloud modernization, each with a perfect readiness score of **100** and **Low** risk level.

API Enablement Candidates

EMPREC.cpy (Readiness Score: 100)

- Copybook containing shared data structures for employee records
- No risk factors or complex dependencies
- Can be easily converted to modern data schemas or API contracts

JOB001.jcl (Readiness Score: 100)

- Batch orchestration job coordinating multiple programs
- No risk factors or blocking dependencies
- Can be modernized into API-driven workflows or cloud-native orchestration

Not Recommended for Immediate API Enablement

CUSTOMER.cbl (Readiness Score: 50, Medium Risk) - Requires dependency review before modernization due to external program dependencies, DB2 dependencies, and database write operations.

PAYROLL.cbl (Readiness Score: 40, High Risk) - Needs detailed impact analysis and phased modernization due to multiple complex dependencies including external programs, DB2, database writes, and copybook dependencies.

Recommendation

Start your API enablement journey with **EMPREC.cpy** and **JOB001.jcl** as they have zero risk factors and can provide quick wins. These low-risk modernizations will help establish patterns and best practices before tackling the more complex CUSTOMER and PAYROLL programs.
